Daily Model Brief, October 23, 2026

No vendor changed a token price on any model I track today. OpenAI's October 23 shutdown date for gpt-4.1-nano, o4-mini and gpt-image-1 has arrived, and Perplexity retires its routes to seven older OpenAI models at 7:00 PM CT tonight.

Friday, October 23, 2026 · Prices as of 8:45 AM CT

Executive Summary

No token price changed today on any model I track. Anthropic, OpenAI, Google, xAI, DeepSeek, Z.ai, MiniMax, Mistral, Alibaba, Meta, TypeSafe, Xiaomi, Tencent and StepFun show the same prices as Thursday. Alibaba updated its prices October 22, and every Qwen price I track matches, including Qwen3.8-27B at $0.50 input and $3.00 output per million tokens.

OpenAI gives October 23, 2026, today, as the shutdown date for `gpt-4.1-nano`, `o4-mini` and `gpt-image-1`, with no time of day (midnight UTC was 7:00 PM CT Thursday). Google's `deep-research-pro-preview-12-2025` also reaches its shutdown date today, the day after `gemini-omni-flash-preview` and three Veo 3.1 previews reached theirs.

Perplexity retires its Agent API and Orchestrator API routes to seven older OpenAI model IDs (openai/gpt-5.4, gpt-5.4-mini, gpt-5.4-nano, gpt-5.2, gpt-5.1, gpt-5 and gpt-5-mini) at 7:00 PM CT today. It also renamed the Agent API's "preset" setting to "effort"; Perplexity says the models, limits and pricing stay the same and the old "preset" name is still accepted.

Anthropic launched Claude Models on Google Cloud (Anthropic managed): Anthropic's own Claude API, reached through a Google Cloud project, with Google Cloud IAM for access and Google Cloud Marketplace for billing. Fast mode for Claude Opus 5.5 is available there. Anthropic's own prices did not change. Meta now bills every SAM 3.1 video request for at least 50 frames.

Microsoft's Foundry retirement page filled in new dates: DeepSeek-V3.2 and DeepSeek-V3.2-Speciale retire November 1, 2027 (Microsoft names DeepSeek-V4.1-Flash and DeepSeek-V4-Pro as replacements), cohere-command-a February 15, 2027, embed-v-4-0 June 1, 2027, Cohere's rerank v4.0 models September 13, 2027, and gpt-oss-120b September 15, 2027. Kimi-K2.7-Code on Foundry moved from October 3, 2026 to April 16, 2027.

Prices from Amazon, ByteDance, IBM and Moonshot could not be confirmed today, so Kimi K3 is not re-listed; Microsoft lists no pay-as-you-go prices. The performance chart still uses scores from October 16.

What This Means for Customers

- If anything still calls `gpt-4.1-nano`, `o4-mini` or `gpt-image-1`, today is OpenAI's listed shutdown date. OpenAI names `gpt-5.6-luna`, `gpt-5.6-terra`, and `gpt-image-2.5-sunburst` or `gpt-image-2.5-flare` as replacements.
- If you route OpenAI models through Perplexity's Agent or Orchestrator API, update model selections and fallback chains before 7:00 PM CT today; after that the retired IDs are no longer accepted.
- If you use Google's `deep-research-pro-preview-12-2025`, move to `deep-research-preview-04-2026`; Google's shutdown date is today, with no time of day.
- If your company buys cloud through Google, Claude is now available as an Anthropic-operated service billed through Google Cloud Marketplace, with Opus 5.5 fast mode. Compare it with Anthropic's direct pricing before switching.
- If you segment short video clips with Meta's SAM 3.1, budget at least 50 frames per request; shorter clips are billed as 50.

- If you run DeepSeek-V3.2 or DeepSeek-V3.2-Speciale on Azure Foundry, you have until November 1, 2027. If you run cohere-command-a there, plan for February 15, 2027.
- If your agents search the web through DeepSeek Harness, Claude Code or Codex, those server-side calls start billing at $0.75 per 1,000 successful Search or Fetch requests at 11:00 AM CT on Saturday, October 31. Track this separately from token spend.
- Claude Haiku 4.5 is still active. Anthropic lists retirement not sooner than October 15, 2026, a date that has passed, and still sets no date. Keep a tested fallback ready.

- Anthropic now says its dates also apply to Claude Models on Google Cloud (Anthropic managed); partner-operated platforms set their own schedules.
- OpenAI's earlier notices are unchanged: gpt-5.3-codex, gpt-5.1 and gpt-5.4-nano shut down April 1, 2027, and the /v1/audio/translations endpoint shuts down February 26, 2027.
- No shutdown dates moved since Thursday at Anthropic, Google or OpenAI.

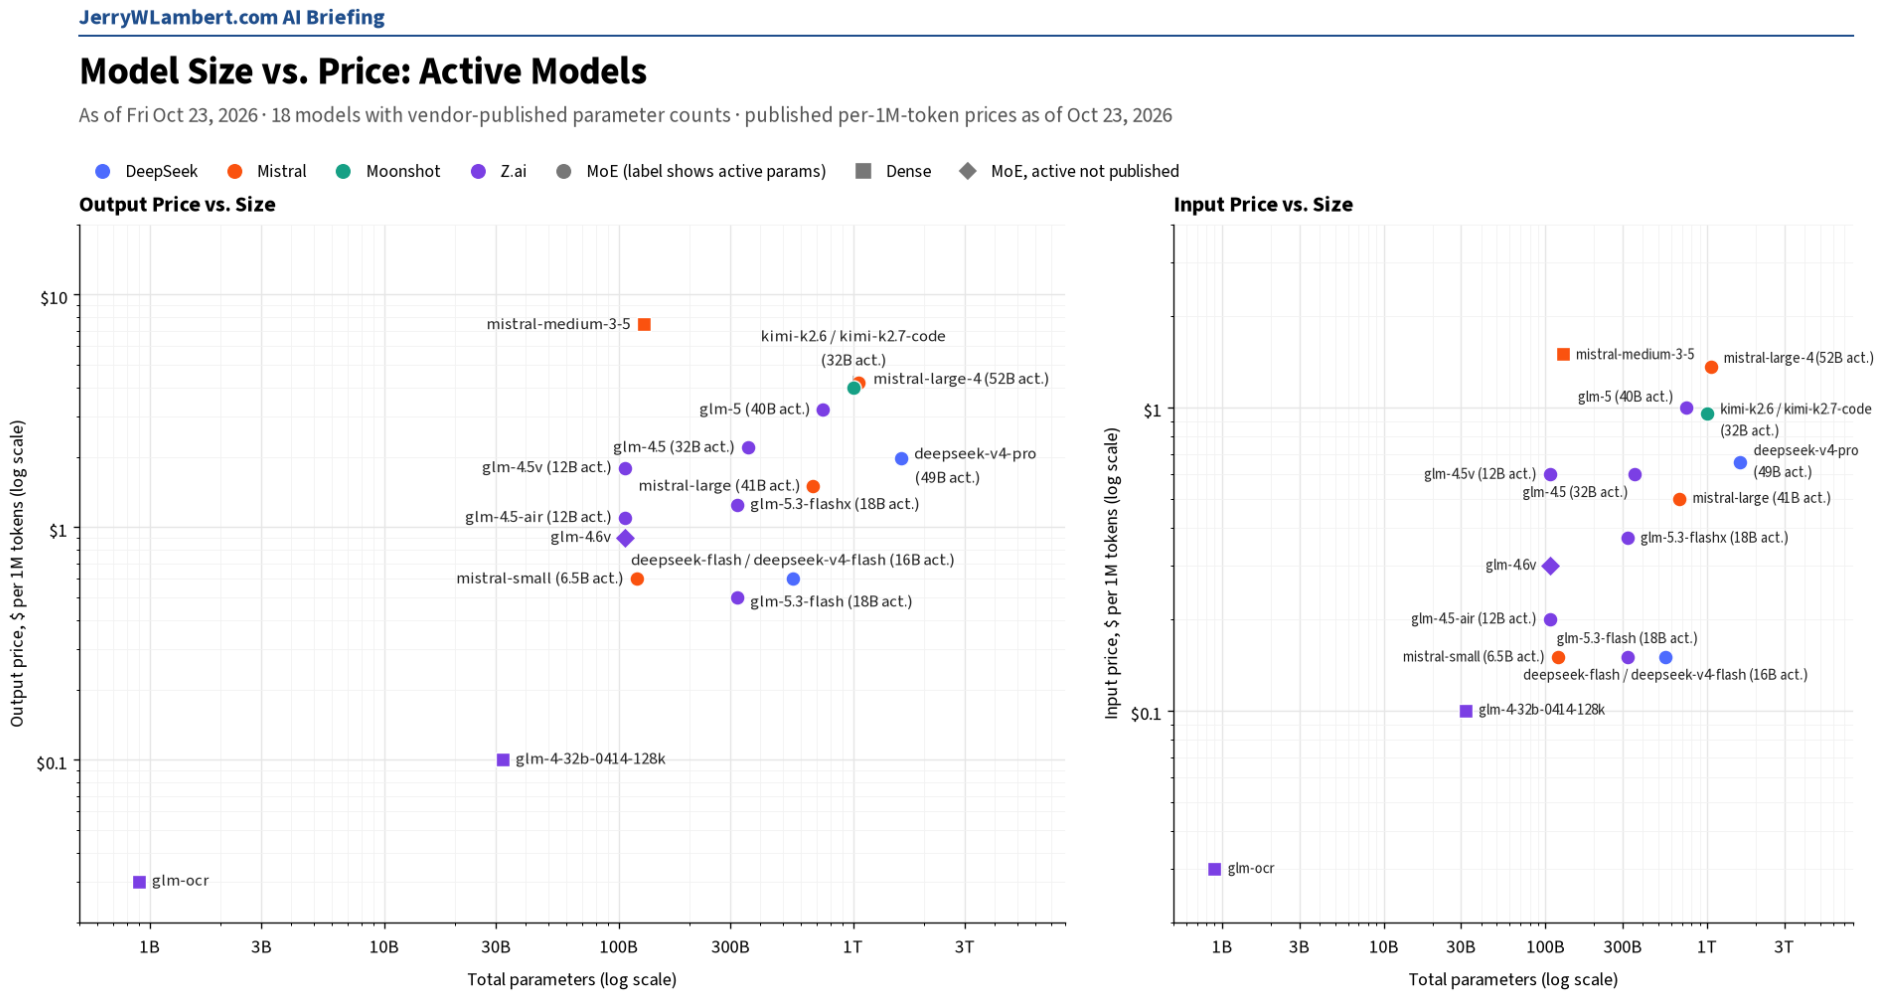

Agent Platforms

Hosted AI agents that come with their own persistent cloud computer.

- **Grok Bot**: its own persistent cloud computer; access is included in paid plans and draws from a weekly usage pool. New release v0.75.2 (October 22) adds Pages (reports, memos and dashboards the bot keeps up to date), video creation, Shop Pay and X Money checkout, and team admin controls for sharing. No plan or computer change.
- **dots (OpenAI)**: OpenAI's dots pages returned an error this morning, so nothing is verified today. Last confirmed: a dot "has its own cloud computer," and the first comes with Pro and Business Premium at no extra cost.
- **Muse (Meta)**: "You and your Muse share your own dedicated computer in the cloud." Runs on Muse Spark 1.3, whose API price is unchanged at $1.25 input, $0.15 cached and $4.25 output per million tokens. Billing is unverified today.
- **Manus**: the Cloud Computer add-on is a persistent server billed separately at $30 a month (2 vCPUs, 4 GB RAM, 70 GB storage) or $50 a month (2 vCPUs, 8 GB RAM, 120 GB storage). No change.
- **Genspark Claw**: runs "on a dedicated cloud computer provisioned just for you," which requires a Lite, Standard or Powerful Cloud Computer subscription; Genspark publishes no dollar amounts. No change.

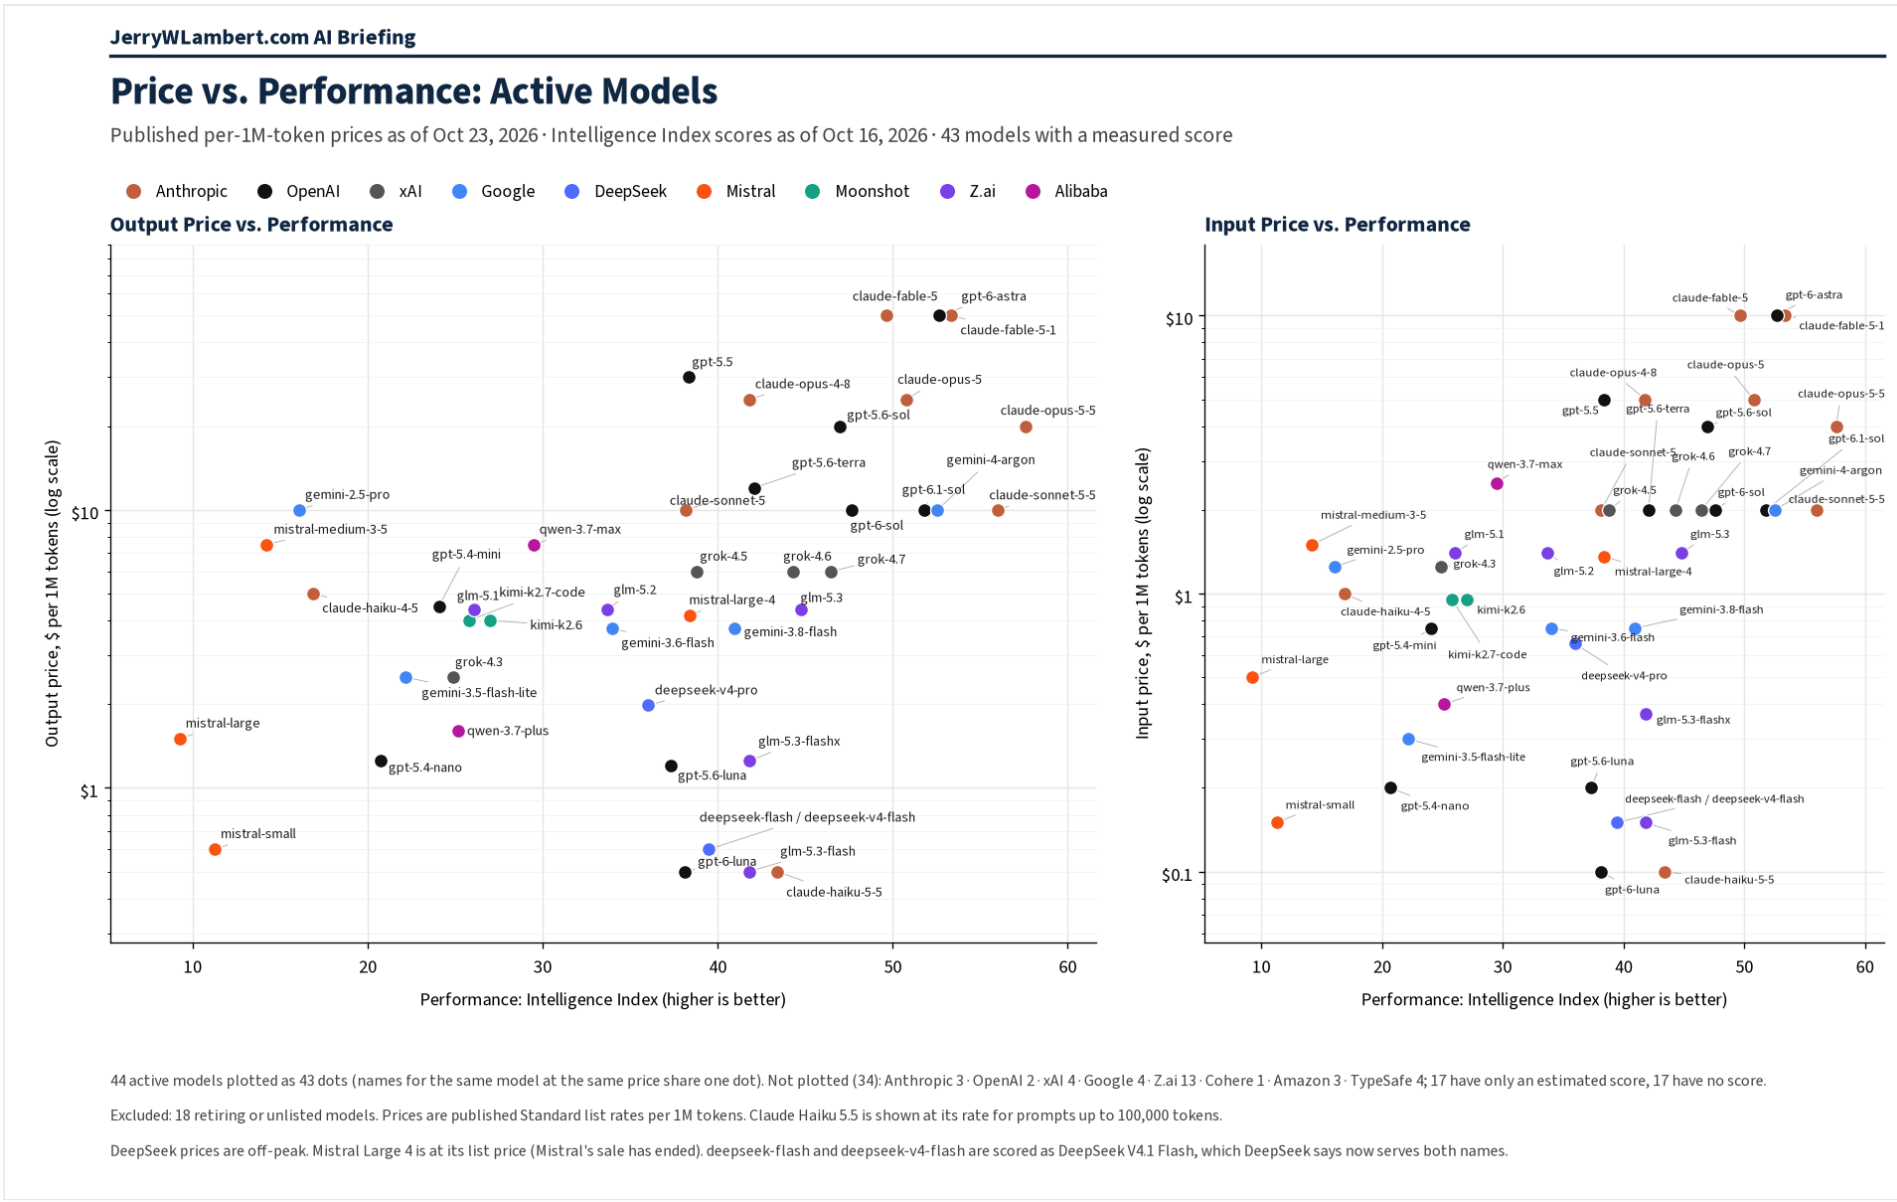

All times Central. Vendor prices, dates and model IDs are as of 8:45 AM CT on October 23, 2026. Chart prices are as of October 23, 2026. Performance scores are as of October 16, 2026. Items that could not be confirmed are marked unverified.

Model Size vs. Price

Across the 18 active models whose vendors publish parameter counts, price rises with total size (rank correlation 0.62 on output price). Anthropic, OpenAI, xAI and Google publish no parameter counts, so their models are not plotted. No plotted price changed since Thursday. Prices as of October 23, 2026.

Price vs. Performance

Across the 44 active models with an Intelligence Index score, price rises with performance only loosely (rank correlation 0.49 on output price). Claude Haiku 5.5 leads at $0.50 or less (43.4); GPT-6.1 Sol scores 51.8 and Gemini 4 Argon 52.6, each at $10. Scores as of October 16, 2026; prices as of October 23, 2026.
